

Surgical Plan

In your case, our medical team recommends a one-day hair transplant procedure, carefully designed to deliver a natural, balanced, and long-lasting result. Below you will find a detailed overview of your surgical journey:

- Arrival at the clinic and warm welcome by our medical staff.
- Completion of consent documentation and final review of all procedural details to ensure clarity and confidence before the procedure begins.
- Personalized preparation phase: recording of vital signs, high-definition medical photography, precise hairline design tailored to your facial features, shaving of the donor area, and hair dyeing if required for optimal visualization.
- Beginning of the procedure: administration of local anesthesia to ensure maximum comfort, followed by meticulous graft extraction from the donor area using advanced techniques.
- Lunch break after completion of the extraction phase, allowing you to rest and recharge before the implantation stage.
- Continuation of the procedure: creation of recipient sites with artistic precision and strategic implantation of the grafts into the frontal area, mid-scalp, and/or crown, according to your individualized surgical plan.
- Final stage: detailed refinement and completion of implantation along the hairline, with special emphasis on natural density, softness, and facial harmony.
- Completion of the procedure and thorough final examination by the doctor to ensure optimal placement and overall symmetry.
- Comprehensive post-operative guidance: you will receive detailed verbal instructions from our medical and nursing team, along with written aftercare guidelines to support proper healing and maximize your results.
-

✨Our priority is not only to restore your hair — but to enhance your confidence with a result that looks completely natural and uniquely yours.
